

Noah Abji

noah.abji@gmail.com ▪ (508) 314-8914 ▪ [LinkedIn](#) ▪ [GitHub](#) ▪ [Portfolio](#)

Summary of Qualifications: Motivated computer science student who is self-driven and has experience in web development (full stack/backend), software engineering, data pipelines, object oriented programming, databases (SQL/NoSQL), and thinks critically with a problem solving mindset.

EDUCATION

University of California, Berkeley

Expected Graduation: May 2026

Bachelors of Arts - Computer Science, Data Science

Berkeley, CA

- **GPA:** 3.97/4.00 | Dean's List - College of Letters and Science
- **Organizations:** Political Computer Science, Data C100 Course Staff Member (Spring 2025)
- **Relevant Coursework:** Data Science, Optimization Mathematics, Linear Programming, Object Oriented Programming, Data Structures, Algorithms, Parallelism/Multithreading, CPU, Artificial Intelligence, Databases, Cybersecurity, Cryptography

WORK EXPERIENCE

Software Development Engineer Intern

Amazon - Alexa Local Search

May 2025 - August 2025

- Accelerated knowledge transfer through authored runbooks, design, & onboarding documents for Alexa Plus Local Search
- Improved error handling in resource creation and validation workflows for **AWS Sagemaker** and using **AWS Lambda**
- Implemented a production workflow to populate **OpenSearch & Dynamo DB**, and provision **SageMaker** instances
- Secured critical resources by placing them in a Virtual Private Cloud (VPC), prepping for security review
- Implemented dashboard access (Kibana) for VPC-secured OpenSearch domains, simplifying the testing process

Software Development Engineer Intern

Amazon - Alexa Weather

May 2024 - August 2024

- Improved architecture of Alexa & AGI Weather through efficient usage of **AWS Lambda & DynamoDB** in **Java & Kotlin**.
- Increased scalability on an alert service with over 30 million clients while reducing average alert latency by up to 99.8%.
- Wrote technical documentation, hosted learning sessions, and implemented **Kotlin** usage in pre-existing Java packages.
- Parallelized existing database access abstractions to reduce costs of lambda invocations.
- Assured quality in changes through rigorous integration and end to end tests from SNS feeds to physical Alexa devices.

Software Engineer Intern

Link Health

September 2023 - December 2023

- Developed a web application to remotely register individuals for all welfare programs for which they are eligible.
- Implemented depth first simplification algorithms to effectively simplify tree-like eligibility requirements for 300 programs
- Containerized the web application using docker to allow for more efficient development
- Implemented user authorization and authentication with **Node.js & ExpressJS** middleware and a **PostgreSQL** database

Data Science Team Lead (Intern)

Link Health

December 2022 - December 2023

- Managed and mentored a team of 11 data scientists at Link-Health to improve targeting and research capabilities.
- Leveraged **Pandas, Plotly, Scikit-Learn, & NumPy** as tools for data pipelines & visualizations for US Census Bureau data.
- Implemented asynchronous functions to increase data scraping efficiency from the US Census Bureau by 97.8%.
- Trained a multilinear model (machine learning) and used statistical methods to predict certain health outcomes per ZCTA.
- Successfully identified over 70,000 contacts for outreach and manipulated over 3 million rows of unique data.

PROJECTS & OTHER EXPERIENCE

Personal Website: [noahabji.vercel.app](#)

AI-Powered Search Engine - Generative AI | [Github](#)

- Implemented an AI-driven search engine which effectively synthesizes or individually summarizes search results
- Full stack web application using a RESTful API with error handling, OpenAI LLM API and Metaphor API integration, and dynamically renders data in an elegant user interface
- **Utilized:** Node.js, Express, JavaScript, TypeScript, ReactJS + Vite, REST API, GIT, LLM, HTML/CSS

SKILLS

- **Technical Skills:** Amazon Web Services (AWS), ReactJS, Git, Node.js, REST API, pandas, PostgreSQL, Scikit-Learn, NumPy
- **Coding Languages:** Python, TypeScript, JavaScript, Java, Kotlin, HTML/CSS, SQL, C, C++, Assembly (RISC-V, x86)
